

Partnerships with companies in their energy transition projects

Voltaia strengthens access to competitive green energy

As a Mission-driven company, Voltaia is committed to produce renewable energy that is accessible to as many people as possible.

Voltaia has positioned itself as a leading actor in the energy transition by offering companies contracts that combine economic performance and environmental responsibility: the Corporate Power Purchase Agreement (CPPA).

CPPAs are long-term contracts, lasting on average 20 years, directly signed between the electricity consumer and the producer who builds a new renewable power plant to supply its customer.

CPPAs are of interest to both parties

Competitiveness and predictability: secure a competitive long-term energy supply tariff, protected against price fluctuations. This contract offers a real advantage in a context of energy scarcity, cost inflation and price volatility.

Sustainable development: reduce the environmental impact of the company activity by reducing its CO₂ emissions using renewable electricity.

Reliability and security: improve the security of electricity supply in areas where the grid supply is unreliable.

CPPAs: Voltaia's new growth driver

With a global context of price volatility combined with a policy of increasing the use of these contracts, Voltaia provides access to green and competitive energy to an ever-increasing number of partners.

In France, Voltaia is the leader in CPPAs, with contracts signed with several companies for a total installed capacity of 694 MW. More than half (350 MW) is made up of the largest CPPA ever signed in France to date between Voltaia and Renault Group to support their energy transition through the supply of solar electricity, which represents half of the Group electricity consumption.

In developing countries, CPPAs make it possible to ensure a reliable supply of electricity in certain regions where the electricity grid does not exist or is deficient.
